DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the 21 cutting edges in claim 2 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

3. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 is indefinite because it is not clear what the phrase "11 to 21 cutting edges are **preferably** defined" is intended to encompass.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted Prior Art in page 1 lines 12-25 of the specification, hereinafter Prior Art in view of the Goldhammer [4,625,925].

Prior Art discloses in Fig 1 most the element of the claims including a pair of cylindrical rotary cutters 1 and 1', which are configured to rotate in opposite directions to each other, each cylindrical rotary cutter includes a polygonal shaft 2 and a plurality of cutting blades 4 that are mounted on the shaft 4, a spacer 6 is configured between each pair of adjacent cutting blades 4 partitioning the cutting blades 4 there between, and

thereby allowing the cutting blades 4 to be assembled and mounted in an interleaving fashion on the two cylindrical rotary cutters 1 and 1'.

Prior Art but may not disclose that the plurality of cutting edges are circumferentially arranged and defined on a periphery of each of the pair of blades of the cutting blades, thereby forming a compact assembly of blade edges, and realizing minimum distance between mutually adjacent cutting edges; tens of sheets of paper can be fed in between the cutting blades at one time.

Goldhammer is cited to show desirability, in the relevant art to have a cutting arrangement wherein the plurality of cutting edges [teeth 16] are circumferentially arranged and defined on a periphery of each of the pair of blades of the cutting blades [col 4 lines 35-54], thereby forming a compact assembly of blade edges, and realizing minimum distance between mutually adjacent cutting edges; tens of sheets of paper can be fed in between the cutting blades at one time [col 6 lines 10-11]. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the blades in the Prior Art paper shredder to have the particular cutting arrangement as taught by Goldhammer in order to comminutes the material to be comminuted with low energy requirement but into particles of relatively small size.
